

Sense

Turn your connected devices into a presence detection system attuned to you.

The reality of home monitoring

Many customers wish they could keep a better eye on home activity while they're away—but traditional camera systems can feel complicated and invasive. Meanwhile, service providers seek to offer differentiated technology that enhances their customers' smart homes and paves the way for the future of automation.

WiFi waves increase home awareness without being invasive.

Plume's Sense service turns the smart devices in your customers' homes into camera-free motion sensors, transforming the whole home into a sensor. The service is activated with a cloud update, running on SuperPods, and supported by OpenSync devices. Now, you can offer customers a private, convenient way to track expected and unexpected activity in their homes.

Key features

Existing device use

Connected devices on the home network work together to detect movement inside the home, interpreting changes in WiFi waves to sense motion.

Real-time mode

See instant updates where movement in the home is located, especially after receiving a notification of unexpected motion.

Activity alerts

Alerts via the HomePass app can help customers keep an eye on family members in need, and see when visitors arrive or kids come home.

Smart activation

Using GPS, the system turns on automatically when the customer leaves, and turns off when they return home. No need to remember to enable the system.

Historical motion data

Customers can see movement patterns in their home over the last 7 days, through insightful data visualizations in the HomePass app.

Pet mode

Users can customize the system to ignore family pets, leaving them free to roam without triggering false alarms.

Key benefits

Whole-home awareness

Sense helps smart homes become more attuned to its members, with 24/7 visibility into home activity from any location.

Peace of mind

Through the HomePass app, customers can know when visitors come and go, and be alerted to any unexpected movement.

Privacy

Customers can maintain home privacy using existing hardware for motion detection rather than invasive cameras. Detect activity even in bathrooms and bedrooms, without compromising privacy.

Convenience

Sense works with your customers' existing home network. Service is delivered through Plume SuperPods, with no additional hardware or installation.

“Functionality like Sense opens up an entirely new level of sensing capability that will spur exciting new usage models beyond core internet connectivity.”
